PTC WindChill

## Who We Are

Impac Systems Engineering is a 22-year old Houston based company specializing in full service engineering, product design and engineering data management. We are a Certified Training Center and reseller for PTC. Our organization enables our customer organizations to generate immediate and sustainable value by delivering innovative engineered management solutions by leveraging the power of technology and our many years of experience.

## What We Do

We offer engineering design and data management systems and services. Our approach combines state of the art design and management tools and professional engineering expertise to exceed expectations. We provide fast, thorough, innovative solutions to your technical management tasks. We focus on three service disciplines; strategy, development and creative design. All three are crucial elements of our engagements and work in concert to plan, design, build and implement the most comprehensive engineering solution.

### Connect Teams and Consolidate Efforts

Whether your business is in manufacturing, transportation, or life sciences; whether you're a global conglomerate, a regional supplier, or a small service bureau, you face obstacles while trying to manage content and processes. Your success relies on efficient and effective development of complex information assets including product designs, service documentation, and regulatory submissions. Windchill, PTC's production-proven content and process management software, offers a fast, secure solution requiring only a Web browser to access. Windchill enables companies to streamline content development processes and deliver superior physical goods and information products.

### Workgroup data management

With production-proven Pro/ENGINEER workgroup data management capabilities, Pro/INTRALINK is the industry-standard solution to manage concurrent design teams and the power of Pro/ENGINEER data associativity. Engineers easily perform data management tasks, so they can concentrate on innovative product design. The result: more control, higher quality designs.

### PLM On Demand

Designed to eliminate the hurdles of upfront investment, IT resources and longer deployments, PTC PLM On Demand Standard, delivered as a service and hosted by IBM, is your easy-to-use, comprehensive solution for small-and-medium sized businesses. Go live in days, access from anywhere and enjoy the security, performance, and scalability of IBM hosting. Enjoy all the benefits and capabilities of PLM - without all the hurdles.

### Manage your Supply Chain

Optimizing supplier and manufacturer selection across multiple product lines, programs, and geographies is a major challenge facing product companies today, with huge implications on product cost and time-to-market. Windchill Supplier Management delivers the key capabilities that you need to meet the demands of complex, global supply chains by optimizing manufacturer part sources and vendor selection with approved manufacturer and vendor lists.

### Integral parts management

Part duplication and part number proliferation is inefficient and expensive. By reusing existing designs via an online catalog, you can reduce cost and time to market. Windchill PartsLink Classification and Reuse – an integral option for Windchill PDMLink – allows you to organize internal design libraries and make them available to your engineering team through flexible, easy-to-use Web-based library searching mechanisms.
